

AMENDMENTS TO THE SPECIFICATION

IN THE ABSTRACT OF THE DISCLOSURE:

Replace the Abstract of the Disclosure currently of record with the attached new Abstract of the Disclosure.

Preference of tone and color for a specific target is reflected on image data obtained by a digital camera, and colors and tones can be set as desired for each model of a digital camera. A reference tone setting menu and a model tone setting menu are prepared in a memory and can be customized when provided to tone setting device. Color correction device can also select and customize a desired one of reference color correction conditions and a desired one of model color correction conditions from a reference color correction menu and a model color correction menu prepared in a memory.
